

# Cordless Crimp Pincer

## Oetiker CC 20

Recommended for the installation of Multi Crimp Rings

- Advantages**
- Efficient
  - Convenient
  - Ideal for low volume swaging

---

**Convenient:** cordless assembly of small Multi Crimp Rings

---

**Ergonomic and light:** for easy, user-friendly handling

---

**Process reliable:** Monitoring and data collection of process parameters.

---

**Effective:** quick, precise swaging of Multi Crimp Rings in low volumes

---

**LED display:** indicates closing force quality, battery charge and service status

---

**Extended maintenance intervals:** to suit volume production applications

---

SCOPE OF SUPPLY

## Cordless Crimp Pincer Oetiker CC 20

TECHNICAL DATA\*

**CC 20:**

External dimensions: approx. 476 × 81 × 124 mm

Weight: approx. 3300 g\*\*\*

Closing time: 4–6 seconds

**Oetiker CC 20 scope of supply**

CC 20 cordless Crimp Pincer with 2 batteries

PC software (for adjusting the closing force, tool testing and retrieval of historical data)

Technical manual (multilingual)

Country-specific charger

Carrying case

\* Approximate information

\*\* to suit regional power plug

\*\*\* incl. 1 × 2 Ah battery and standard pincer head

### DESCRIPTION

This cordless Crimp Pincer has been developed especially for the industry and trade sector so that Oetiker Multi Crimp Rings can be assembled economically in low volume production runs or in the field.

Multi Crimp Rings in the 5-25mm diameter range can be quickly and easily swaged using this tool.

Application specific sizes and crimping pincer jaw item no.'s are defined by Oetiker Application Engineering or Power Tool Service Centers.

The PC software included in the scope of supply enables easy, precise and tamper-resistant adjustment of the process settings as well as the documentation and analysis of historical process data saved in the tool.

As an alternative to cordless battery operation, the CC pincers can also be used with a corded AC adapter.

The automatic ram retraction ensures the tool jaws return to their initial position after reaching the pre-set closing parameters. Furthermore, the tool has an emergency stop function which immediately stops jaw closure upon release of the trigger switch.

The 360° rotatable pincer head allows excellent maneuverability.

To guarantee precise and accurate closure, a pincer test must be carried out at least once per shift or once per day at minimum. A pincer test is also necessary after any time a pincer component is exchanged.
