DESCRIPTION

Cordless CP 10 and CP 20 pincers are ideal alternatives to pneumatic tools where installation flexibility is of paramount importance. The tools guarantee a quick and effortless installation of Oetiker ear clamp models with high accuracy and excellent maneuverability in tight spaces.

The PC software included in the scope of supply enables easy, precise and tamper-proof adjustment of the closing force as well as the documentation and analysis of historical process data saved in the tool.

As an alternative to cordless battery operation, the CP pincers can also be used with an corded AC adapter.

The automatic ram retraction ensures the tool jaws return to their initial position after reaching the pre-set closing force. Furthermore, the tool has an emergency stop function which immediately stops jaw closure upon release of the trigger switch.

The 360° rotatable pincer head allows excellent maneuverability.

To guarantee precise and accurate closure, a pincer test must be carried out at least once per shift or once per day at minimum. A pincer test is also necessary after any time a pincer component is exchanged.
